

Lookmefy Android Build Difference Report

Comparison of versionCode 18 and versionCode 19 APK/AAB artifacts. Generated on 2026-09-01.

Summary

- v19 is a narrow release over v18: app versionName stays 1.0.1, package stays com.lookmefy.app, SDK levels and permissions stay the same.
- The Android versionCode moves from 18 to 19, which is the required Play Store monotonic build increment.
- The embedded Expo config in v19 adds explicit Android and iOS icon paths; Android launcher image resources changed across all densities.
- No ZIP entries were added or removed in either APK or AAB; only metadata, launcher image resources, dex/profile hashes, and AAB signing metadata changed.

Binary Payload Diff

Artifact	Entries	Added	Removed	Changed entries	Interpretation
APK	1568 -> 1568	0	0	14	No structural ZIP changes. Changed entries are manifest/config, baseline profile, classes2.dex, and obfuscated launcher WebP resources.
AAB	1601 -> 1601	0	0	17	No structural ZIP changes. Changed entries include launcher density resources, app.config, manifest, classes2.dex/profile, and expected signing metadata.

Changed AAB Entries

base/res/mipmap-xxxhdpi-v4/ic_launcher_round.webp	15,523	30,461	Launcher icon image changed

Launcher Icon Resource Size Changes

Density	Normal v18 -> v19	Round v18 -> v19
mdpi	2,096 -> 2,268 bytes	2,858 -> 2,268 bytes
hdpi	3,056 -> 4,629 bytes	5,024 -> 4,629 bytes
xhdpi	4,569 -> 8,053 bytes	7,098 -> 8,053 bytes
xxhdpi	6,464 -> 17,625 bytes	10,676 -> 17,625 bytes
xxxhdpi	9,250 -> 30,461 bytes	15,523 -> 30,461 bytes

Launcher Icon Preview

Preview uses the xxxhdpi normal launcher resource from each AAB. The Android manifest still points at the same icon resource id; the image payload behind that resource changed.

base/res/mipmap-xxxhdpi-v4/ic_launcher.webp	base/res/mipmap-xxxhdpi-v4/ic_launcher.webp

Conclusion

The previous build, versionCode 18, and the latest build, versionCode 19, both ship Lookmefy 1.0.1 for package com.lookmefy.app. The meaningful release difference is icon/config packaging plus the Android build number increment. There is no evidence in APK badging of changed package name, versionName, SDK levels, permissions, launch activity, or native ABI support.
